Contents

Summaries .......................................................................................................................... 7
Streszczenia ...................................................................................................................... 19

Justyna Adamczyk
Basic Geotechnical Properties of Mining
and Processing Waste — a State of the Art Analysis ......................................................... 31

Wojciech Anigacz, Krzysztof Drożdżol, Elżbieta Kokocińska-Pakiet
Examination of an Earth Slope Settlement ........................................................................ 43

Aleksandra Borecka
Description and Evaluation of the Landslide Hazard.
A Case Study in a Landslide in Radziszow ....................................................................... 49

Marian Branny, Michał Karch, Waldemar Wodziak,
Janusz Szmyd, Marek Jaszczo, Remigiusz Nowak
Air Flow Measurements through the Laboratory Stand
of the Crossing of the Long Wall
and Ventilation Gallery for CFD Code Validation ............................................................. 59

Marek Cała, Michał Kowalski, Agnieszka Stopkowicz, Justyna Adamczyk
Numerical Estimation of Effectiveness
of Fault Zones Protection in Longwall .............................................................................. 69

Marek Cała, Krzysztof Polak
Utilization of Surface- and Groundwater
for Post-mining Open Pits Reclamation in Lignite Mining ................................................ 83

Paweł Ciężkowski
Correlation of Energy Consumption and Shape of Crushing Plates ................................. 91

Sylwia Cygan
Eden Project — Identification
of the Revitalisation Undertaking Success Factors ............................................................ 101
Bartłomiej Czado, Bogumił Wrana
Bearing Capacity of Pile Foundations Based on CPT Results in Accordance to Polish Standards and Eurocode 7................................. 111

Danuta Domińska
Initial Assessment of Safety of Concrete Lining of Shaft Inlets Using Numerical Calculations ................................................................. 121

Zenon Duda, Katarzyna Kryzia
Revitalization of Plauen’s Dike within the Historical Defence Walls of the Malbork Castle Museum in Malbork.............................. 131

Paweł Fedczuk
Elasto-plastic Model of Unsaturated Soil ................................................................................................................................. 137

Danuta Flisiak, Malwina Kolano
Research on Geo-mechanical Properties of Rock Salt in Kłodawa Diapir .......................................................................................... 145

Marek Kawa
The Three-dimensional Analysis of the Bearing Capacity of the Square Footing Located in Geomaterials with a Layered Microstructure............ 155

Ewa Kawalec-Latała
Detection of Selts Deposits Geometry Variation ......................................................................................................................... 161

Roman Kinash, Oksana Kinash
An Estimation of Reinforced Concrete Beams Reliability by the Method of Histogram .................................................................................. 171

J. Krzysztof Lenartowicz, Anna Ostrega
Revitalisation of Post-industrial Areas through the Preservation of Technical Heritage in Poland .................................................................................. 181

Andrzej Leśniak
Accuracy of Mine Tremors Location with 1C/3C Seismic Network ........................................................................................................ 193

Grzegorz Lizurek, Stanisław Lasocki
Studies of Induced Seismic Events Clustering in Equivalent Dimension spaces in chosen Rudna Mine Panels ........................................... 203
Dariusz Łydżba, Adrian Różański, Maciej Sobótka
An Annual Cycle of Changes
in Water Temperature as a Cause of Cracking
in Massive Concrete Hydraulic Structures ................................................................. 217

Dariusz Łydżba, Matylda Tankiewicz
Preliminary Study of Failure Anisotropy Characterization of Varved Clay ................ 229

Stanisław Nawrat, Natalia Schmidt, Sebastian Napieraj
Selected Issues Concerning Protection
of Road Tunnel Structures and Ventilation Systems in Relation to Fire Hazard .......... 235

Łukasz Orabczuk, Irena Bagińska
The Analysis of Estimation the Pile Bearing Capacity on the CPTU ....................... 247

Anna Ostręga, Dariusz Teodorski, Roman Becker
Regeneration of Post-industrial Facilities
in the Legnica-Głogów Copper Mining District Illustrated
with an Example of “Obora” Filling Sand Mine .......................................................... 259

Michał Ksawery Skrzycki, Bogumił Wrana
Influence of Clay Mineral Content on Landfill Cap Cover
with Special Attention to Swelling ............................................................................. 269

Ewa Xenia Takuśka-Węgrzyn
The Use of Time Intervals between Seismic Phenomena
in the Risk Assessment of Mining Shocks in Rock Masses ....................................... 279

Ryszard Uberman, Anna Ostręga
Reclamation and Revitalisation of Lands
after Mining Activities. Polish Achievements and Problems ................................... 285

Janusz Ukleja, Damian Bęben, Wojciech Anigacz
Determination of the Railway Retaining Wall Dimensions
and its Foundation in Difficult Terrain and Utility ................................................. 299

Tymoteusz Zydron, Joanna Dąbrowska
The Influence of Moisture Content on Shear Strength
of Cohesive Soils from the Landslide Area around Gorlice ..................................... 309
