

Contents

The 20th anniversary of Computer Methods in Materials Science	127
Michał Czarnecki, Mateusz Sitko, Łukasz Madej	
The role of neighborhood density in the random cellular automata model of grain growth	129
Rolando Yera, Carlos G. Méndez, Pablo J. Sánchez, Alfredo E. Huespe	
Effective properties of periodic media in elastodynamic problems	139
Daniela Fátima Gomes, Bernardo Martins Braga, Roberto Parreiras Tavares, Maurício Covcevich Bagatini	
Mathematical modelling of the continuous casting of blooms and beam blanks	149
Shahin Khoddam, Peter D. Hodgson	
Conversion of compression test data into flow curve, accounting for barrelling	157
Bashista K. Mahanta, Nirupam Chakraborti	
Evolutionary data driven modelling and many objective optimization of non linear noisy data in the blast furnace iron making process	163
