

Contents

Konrad Perzynski, Kacper Pawlikowski, Lukasz Madej The role of die definition in the numerical simulations of two-points incremental forming processes	5
Andrea Gregores Coto, Christian Eike Precker, Tom Andersson, Anssi Laukkanen, Tomi Suhonen, Pilar Rey Rodriguez, Santiago Muñnos-Landín The use of generative models to speed up the discovery of materials	13
Fatah Mernache, Abdelaziz Sehisseh, Amina Amrane, Said Hadji Yasmine Melhani, Mohamed Grine, Lakhdar Messai Grain size measurement using a semi-automatic calculation tool	27
François Rosoux, Henri Appeldoorn, Didier Garraay, Eric Beeckman Generation of large scale robotic 3D printing trajectories and optimization of the quality of pieces	35
Dieter Weise, Christian Langner, Alexander Pierer, Verena Kraeusel, Jana Petru, Jiri Koziorek, Michal Prauzek Investigation of the suitability of a fused filament fabricated tool for incremental sheet metal forming	43
Editor's Note	51
