

CONTENTS

Part I

<i>Paweł Cichoń</i>	
RT-UML in modeling of multimedia applications	11
<i>Wiktor B. Daszczuk</i>	
Timed concurrent state machines	23
<i>David P. Gluch, Andrew J. Kornecki</i>	
Automated code generation for safety-related applications: a case study	37
<i>Waldemar Grabski, Michał Nowacki</i>	
Code generation for CSM/ECSM models in COSMA environment	49
<i>Krzysztof Kołek, Andrzej Turnau</i>	
FPGA as a part of MS WINDOWS control environment	61
<i>Adam Piłat, Wojciech Grega</i>	
Hardware and software architectures for reconfigurable time-critical control tasks	69

Part II

<i>Michał Korzycki</i>	
A compile-time deadlock detection pattern	85
<i>Przemysław Maciołek, Paweł Król, Jarosław Koźlak</i>	
Probabilistic anomaly detection based on system calls analysis	93
<i>Sławomir P. Maludziński</i>	
Software configuration management for multiple releases: influence on development effort	109
<i>Kamil Szymański, Grzegorz Dobrowolski, Jarosław Koźlak, Anna Zygmunt</i>	
A proposition of knowledge management methodology for the purpose of reasoning with the use of an upper-ontology	117
<i>Wiesław Wajs, Krzysztof Rączka, Paweł Stoch, Piotr Kruczek</i>	
Integration platform as central service of data replication in distributed medical system	135
Instructions to Authors	143
