The photo on the cover: Tightly folded multilayer sequence of intercalating rock salt (white and grey layers) and claystone (thin dark grey layers, commonly covered with snow-white secondary salt on the outcrop wall), with locally developed small-scale parasitic folds of typical asymmetry in the limbs of larger folds. Rounded shapes of small-scale folds' hinges in claystone and constant thickness of its layers indicate higher viscosity (competency) of the claystone compared to the rock salt during folding. Photo covers area of ca 80 cm × 110 cm. Wieliczka Salt Mine, S Poland (*phot. Marta Adamuszek*)
